Note: About the calculation formula

$\text{Le} = \text{Gain} \times \text{DN} + \text{Offset}$ . In the formula, Le is the equivalent radiation brightness at the entrance pupil of satellite load channel, and the unit is  $\text{W} \cdot \text{m}^{-2} \cdot \text{sr}^{-1} \cdot \mu\text{m}^{-1}$ . Gain and Offset are the scaling coefficient gain and offset, and the unit is  $\text{W} \cdot \text{m}^{-2} \cdot \text{sr}^{-1} \cdot \mu\text{m}^{-1}$ .
